

# Slider Coding Challenge

## The Challenge

Your challenge is to build out a responsive testimonial slider using clean, accessible, and SEO-friendly markup and to get it looking as close to the design as possible. To do this challenge, you need an understanding of HTML, CSS, and JavaScript/jQuery.

You can use any tools you like to help you complete the challenge.

**Your users should be able to:**

- View the optimal layout for the component depending on the device's screen size
- Navigate the slider using either a mouse/trackpad and/or keyboard controls

## Where to Find Everything

Please mimic the designs found in the **'/design'** folder. You will find a mobile and desktop version of the design to work with.

The designs are in a flattened jpg format. This means you will need to use your best judgment for styles such as **'font-size'**, **'padding'**, and **'margin'**, but you will find some basic font styles, and color information in the **'style-guide.md'** file.

You will find all of the required assets in the **'/images'** folder. These assets are already optimized.

## Additional Notes

Please use your best judgment for how you would like to organize and name your final files.

We suggest providing the final project as a zip file (sent via email), a Google Drive or Dropbox download link, or a GitHub link.
